

KUNTELLA BHANU SURYA VEERA SANKAR

☎ +91 6304971288 ✉ kuntellashanker2005@gmail.com in linkedin.com/in/suryakuntella 🐙 github.com/kuntella-surya

SKILLS

- **Programming:** Java, Python, C, C++, JavaScript
- **Machine Learning / Deep Learning:** TensorFlow, Keras, Scikit-learn, OpenCV, YOLOv8
- **Generative AI:** LLMs, RAG Pipelines, LangChain, Ollama, Prompt Engineering
- **Frontend:** React.js, HTML, CSS, Tailwind CSS, Bootstrap
- **Backend:** Flask, Node.js, Express.js, REST APIs
- **Databases:** MongoDB, MySQL, ChromaDB
- **Tools / DevOps:** Git, GitHub, Docker

PROJECTS

FreeWork | React.js, Node.js, MongoDB, Socket.io, Flask, AI/ML, Docker, Jenkins

- Developed a full-stack freelance marketplace enabling project posting, bidding, authentication, and real-time communication, built as part of my 4th-semester internship.
- Implemented real-time messaging and notifications using Socket.io.
- Built AI-driven features including job recommendation engine (TF-IDF + cosine similarity), skill extraction (SpaCy), and sentiment analysis (VADER).
- Utilized Docker for containerization and Jenkins for continuous integration and deployment.
- Managed front-end and back-end functionalities using MongoDB, Express.js, React.js, and Node.js.

Smart Car Paint & 3D Visualizer | YOLOv8, TripoSR, OpenCV, Python, React.js, Node.js, MongoDB

- Built a full-stack platform to detect, segment, and virtually repaint car parts from images.
- Trained YOLOv8 on 3,000+ labeled car images, achieving 92% mAP for precise part detection.
- Applied OpenCV for realistic color transfer, HSL tuning, and visual effects for virtual repainting.
- Converted 2D images into textured 3D car models (.glb) using TripoSR for 360° interactive visualization.
- Developed React.js front-end with live preview and smooth ML–UI interactions.

Agrimitra | React.js, Flask, TensorFlow, LangChain, LangGraph, Ollama, ChromaDB, Prophet

- Developed an AI-powered smart farming platform for crop recommendation, disease detection, irrigation advisory, flood monitoring, and agricultural decision support.
- Built a KNN-based crop recommendation model and a TensorFlow MobileNetV2 plant disease detection model supporting 38 disease classes.
- Integrated Open-Meteo, NASA POWER, SoilGrids, and Agmarknet APIs to deliver weather, soil, irrigation, flood-risk, and market insights.
- Implemented a RAG pipeline using LangChain, Ollama, ChromaDB, vector embeddings, and semantic search over agricultural knowledge sources for context-aware assistance.
- Developed a LangGraph multi-agent system combining weather intelligence, market trends, and Prophet-based price forecasting to generate crop-selling recommendations.

EDUCATION

Aditya University, Surampalem

B.Tech – Data Science

2024 – 2027

CGPA: 7.64

ACHIEVEMENTS

- Solved 600+ Data Structures and Algorithms problems on LeetCode, GeeksforGeeks, and CodeChef.
- Secured 1st place in the Coding Carnival DSA competition among 300+ participants.
- Assisted in coordinating the Intelli Quiz technical event with 500+ registrations.

CERTIFICATIONS

- HackerRank – SQL, Java
- LinkedIn Learning – C++ Foundations, React Essential Training, Machine Learning Foundations
